MATCH ON THE STREET

Overview

- MOTS is an Android application that gives casual and avid sports players the ability to connect with other players near them, in real time.
- It's novel because it's an **on-demand** application that focuses on **sports-related** events.
- We have finished all the major features of our product: Event management, location services, basic profiles, and search/filtering of events.

Extra Features & Feature Cuts

Extra Features:

- Database garbage collection
- Map markers clustering
- Sport icons assignment
- First-time use tutorials

Feature Cuts:

- Some user information: contact info, link to Facebook, rating.
- Some event details: tags, limit of #participants.

Demo

Lessons Learned

- GUI Testing is hard :(
- Languages/software are relatively peripheral, compared to development plans and software designs. Design approaches are universal.
- Clear assignments of duty and tasks are important in group development.
- Development without physical devices to test on is difficult
- Groups of people can accomplish great things
